It will help you achieve consistent drink quality and prolong the life of your brewer. How do I set up my TASSIMO brewer. Whether your TASSIMO brewer is new or has not been used for several

weeks, it is necessary to start up the system by using the Service T DISC, stored in the compartment at the rear or side of the brewer, and rinse the water tank with fresh, clean water. Detailed instructions can also be found in the Manual or Quick Start Guide. Once you've done that, fill the tank with water, select your cup, insert your T DISC of choice into the brewer, and press the button. How do I keep my TASSIMO brewer clean. It is recommended to insert the reusable Service T DISC supplied with the machine and stored in the side or rear of the unit in the brewer every seven days. The barcode reader should be cleaned with a damp soft cloth regularly. All removable parts can be washed by hand, and all but the water tank are dishwasher safe. Why do I need to descale my TASSIMO brewer. All coffee brewers are susceptible to damaging lime scale buildup. Descaling your TASSIMO brewer is essential to increasing the life of your machine. It is recommended to descale the machine every three months, but will depend on your water quality. The brewer will let you know when it needs to be descaled by illuminating the red descale indicator light. How do I descale my TASSIMO brewer. You'll need the Service T DISC and a descaling agent for the process. Use descaling agents outlined in your brewer manual. DO NOT use vinegar to clean your machine, as it will void the warranty. Activate the descaling cycle by holding the start button down for a minimum of 5 seconds. Buy descaler online Detailed instructions can also be found in the Manual or Quick Start Guide. What does it mean when the red indicator light stays on. The descale indicator light remains illuminated red when the brewer needs to be descaled. Note On the older generation Braun brewers, there is no descale warning.

<https://www.hoydallas.com/images/canon-s300-manual.pdf>

Descal your Braun TASSIMO brewer every three months to keep it operating at full potential. What does it mean when the red indicator light is blinking. The water tap indicator light flashes red when the water tank needs to be refilled, the water level is too low to make a drink, or when the tank is not in place. Always refill the tank with clean, fresh, noncarbonated water. Never use chemically softened water. Note On the older generation Braun machine, all the indicator lights flash when the water tank is empty. What do I do if I haven't used my TASSIMO brewer in a while. If your brewer has not been used for several weeks or more, it is necessary to start up the machine by using the Service T DISC, and rinse the water tank with fresh, clean water. What should I do if I have problems with my TASSIMO brewer. Bosch manufactures The TASSIMO system to the highest quality standards. If you have problems with your brewer, please contact the TASSIMO customer service line at 1877TDISCS1 18778347271. Where can I purchase additional or replacement parts. There are certain removable parts that may be replaced if lost or damaged. Please contact the TASSIMO customer service line at 1877TDISCS1 18778347271 to find out if your part is replaceable. My brewer always has the heating light on. What can I do Try turning the brewer off and on again, using the front power switch. If this does not resolve the problem, please call the TASSIMO customer service line at 1877TDISCS1 18778347271 for further assistance. All of the lights on my brewer continue to flash. What can I do Try the following Check that the water tank is full and correctly inserted onto the hook at the rear of the machine. If the water tank is full and correctly attached, check the barcode reader. If the barcode reading window is dirty or if there is condensation present, clean with a soft moistened cloth. If neither of the above work, try repeating the initialization procedure as outlined in the user manual.

<http://hsttechnologies.com/images/canon-s40-camera-manual.pdf>

My drink volume is shorter than normal or the flow of the drink into the cup is very slow. What can I do Try the following If the water tank is not correctly fitted, the water flow may be restricted. Check that the water tank is full and that the slot is correctly inserted onto the hook at the rear of the machine. The piercer may be damaged or blocked, restricting the flow of the drink. Check the narrower piercer inlet for any signs of damage and the outlet area for any signs of blockage. For damaged piercers, please contact the TASSIMO customer service line for a replacement. For

blocked outlets, please thoroughly clean the piercer. Your machine may need to be descaled. It is recommended to descale your machine every three months, but this will depend on your water quality. Please follow the instructions in your user manual to descale your machine. If none of the above suggestions resolve the problem, please call the TASSIMO customer service line at 1877TDISCS1 18778347271. If you have any questions or need help, were a phone call away. Were available 7 days a week at 1877TDISCS 18778347271 MondayFriday 8am to 10pm EST, SaturdaySunday 9am6pm EST or you can contact us here. From college dorms to family kitchens, theres a TASSIMO brewer right for you. SiteMap Privacy Policy System Maintenance Change Your Region. It is at times like these that you need clear simple instructions so you can get everything running smoothly again and get your coffee, just how you like it. To help, we have provided answers to common issues and links to instruction manuals for your Tassimo coffee machine, just in case you have misplaced them. Water dripping from the brewing unit Bosch Tassimo Coffee Machine Manuals Conclusion Related content Common Tassimo Coffee Machine Issues Below are a list of the most common issues people search for on Google, hopefully, this will save you some time and get your Tassimo back up and running quickly.

The red light comes on when your pod coffee machine needs descaling, we have an excellent guide on how to fix this with a video tutorial or you can follow the instructions below. Fill a measuring cup with 2 cups of hot water. Mix in the Tassimo descaler. You can get Tassimo descaling tablets at places like Amazon pretty cheap. Pour the water and descaler into the empty water tank. Put your yellow cleaning Tdisc in the disk draw and close the draw. Use the measuring cup to catch the waste water from the spout. If you do not have a cleaning Tdisc you can pick one up on Amazon pretty cheap. Push and hold the start button for about 5 seconds, until you see the red and green light flash. Wait 20 minutes for the cleaning cycle to complete. Once the cleaning cycle is completed, the red light will turn off. Add fresh water to the water tank and run the brewing cycle 4 times to completely clean the pipes and remove any taste from the descaling tablets. Your pod coffee machine is now as good as new and good to go. Check that the water tank is fitted correctly in place. Make sure the tank has sufficient water never use carbonated water as the coffee maker runs at high pressure and will most definitely break. Tassimo not working orange light Again, this is fairly common and nice and easy to fix. Follow the instructions below and you should be up and running in no time. Clean the barcode reader with a damp soft cloth Some people have found that this issue happens when you insert the Tassimo pod prior to turning your pod coffee machine on. Simply turn on your machine prior to inserting the Tassimo pod Tassimo reset This one can be annoying but easy to fix if you know how. If you find that your machine goes straight from auto to standby without completing the brewing cycle, or you need to reset your machine for some other reason, follow the instructions below. Unplug your coffee machine. Prior to turning your coffee machine back on, push and hold the start button.

buddingheights.org/wp-content/plugins/formcraft/file-upload/server/content/files/1626c6a6d4501e---canadiana-snowblower-service-manual.pdf

Turn on your machine and then release the start button. Insert a Tdisc and close lid. Press the start button when your coffee machine goes to auto. You should now be good to go. This could be caused by too much limescale and thus you need to follow the steps above to descale your coffee machine. A good way to spot this, other than the red light, is when you see that the overflow which is behind the splash back is leaking. Either way, follow the descaling tips above and you should now get a full cup of your favourite drink, just like when you first bought it. Or, you could have a blocked pipe or funnel. Make sure you clean all removable parts regularly, all but the water tank are dishwashersafe which makes this incredibly easy. Making sure you keep on top of cleaning your pod coffee machine will mean that it functions for you perfectly every time you need it. Tassimo not heating water This one is tricky as it is most likely a faulty heating element which will need to be replaced or you will

need to buy a new Tassimo coffee machine. However, before you try to replace the heating element or buy a new pod coffee machine, please do try and descale and clean all the parts thoroughly first. Sorry that we could not help more with this, but we can tell you how to prolong the life of your water heater element. Do not add water to the reservoir unless the coffee maker has been turned off for at least five minutes. If the reservoir is empty and the coffee maker is left on, the element continues to heat and becomes super hot. When you add cold water it is likely to cause damage to the element. Do this many times and the element will eventually break. Firstly, be very careful not to try and force the lid open, as you can break it fairly easily. There is a solution, but it is a bit of a hassle. Follow these steps and you will be up and running in no time. Remove the left side of the coffee maker left side as you look at it from the front.

Remove the hose or pipe which fits on to the valve. You can see what this looks like from the picture, but this could vary depending on the model you have. This releases the pressure built up in the system and you should now find that you can open the lid again. Reattach the hose and cable tie. Clip the left hand side panel back on. You should now be able to use your tassimo coffee machine without any issues. Tassimo not pumping water This is another issue which requires a little more work to fix, but it is fairly easy and will save you paying for either a repair or a new coffee machine, so worth a bit of hassle. Essentially, the problem is that some dirt or debris has blocked the pressure valve which connects to the water tank and it will no longer pump water. To fix this we need to clean that out and we should then be brewing again in no time. Follow these easy steps to complete this repair. Find the hose or pipe which connects the water container to the bottom of the heater. Turn the valve 30 degrees. Use needle nose pliers if you have them. Gently remove the valve cover and then remove the spring. Clear out any dirt and debris which might be blocking the water. Put the valve back together and reattach. If I were performing this fix, I would leave the side off for a couple of brews, to make sure that it was working properly, and when I was happy I would then reattach the side. I have not used my Tassimo brewer in a while, what do I need to do. If you have not used your tassimo machine in a week or more, it would be a good idea to rinse the water tank and refill it with clean water. You should use the service disc to start the machine and run it through a brewing cycle to clean the internal pipes and ensure your drinks taste great. Water dripping from the brewing unit There is an easy solution to this problem. Either the tassimo pod is defective or the piercing unit is not properly aligned or inserted. Remove the pod. Check that the unit is clean.

Always a good idea to clean it to be on the safe side. Put the pod back in. Check to see that the piercing unit is properly aligned. If not, insert it correctly. This should fix any dripping issues that you get from the brewing head. Bosch Tassimo Coffee Machine Manuals Below are links to instruction manuals for various Bosch Tassimo models, if you have lost yours, hopefully this helps. We will keep an eye out for other common problems and add solutions to help you in the future. Related content Is Tassimo being phased out or going out of business. Bosch Tassimo coffee machine reviews Storing coffee pods with Tassimo disc holders Cleaning and descaling Reusable Tassimo pods Tassimo Pods About The Author Josh Freeman Josh is a professional writer, who also happens to love coffee, which is great for us at My Virtual Coffee House. What is the problem. Reply Josh Freeman It could be one of the hoses or valves inside the coffee machine which is leaking, but before you take the side off, there are a couple of easy checks you can perform. Check that the bottom of the drink tray is dry. Remove the cup tray and make sure that the bottom where it fits in to place is dry. Put the drink tray back in place. Use the cleaning disk to run a cycle trough the machine. Once complete, remove the drink tray again and see if it is wet where it fits at the bottom. If it's wet it could be a couple of different issues. The valve on top of the heater is not closing. The most common reason for this is that there is

a build up of lime scale.

The pressure valve on the top of the heater is staying open, usually due to using water that has lots of calcium in it. The pipe that leads to the bottom tray is leaking. The first thing I would do is buy some descaling tablets and clean your Tassimo machine. Let me know if it fixes the problem. Reply anna I have run the descaling cycle numerous times, once it's done, after the first clean run both red lights are back on the descaling and low water. Any other suggestions. Reply Josh Freeman Hi Anna, Have you actually used descaler when you have run the cleaning cycle. If not, the lime scale will not get cleaned out and the red lights will stay on. Try the following and let me know how it goes. Remove the water filter if you have one as the descaling cycle will fail if you leave it in. Add descaling solution to the water tank. You need at least 500ml of descaling solution in the tank, otherwise you will run out during the cleaning cycle and have to start again. Use a cup or container that can hold at least 500ml in the cup tray. Take the cleaning disc and put it into the machine Now press and hold the brew button for at least 3 seconds. The green and red lights should start flashing, which tells you that you have started the descaling cycle. It is going to take about 20 minutes to run through the complete cycle, but you will know when it is done as the red light will turn off. Now you need to flush your tassimo machine by running clean water through it. Do this a few times. Pop your water filter back in, and you should be good as new. Reply Mike Hello I have a Tassimo 4504 bought in March 2019. Always been good but today tried to descale but machine wont start the programme just clunks. I have tried everything but seems water around by T disc and red light will just not go off. Can you help please Reply Josh Freeman Have you put the yellow cleaning disc in, then held the power button down for 5 seconds until the cycle starts.

Also, remember, if you have a filter, you need to remove that, and add descaler to remove the mineral deposits limescale. Reply linda my tassimo makes no sound and red light fixed Reply Josh Freeman Hi Linda, Have you tried filling the water tank to maximum and running the descaling programme using descaling tablets. It takes about 20 minutes or so to complete, but the red light will then turn off and you should be able to use as normal. We always recommend that you run the cleaning cycle with fresh water fill the tank a few times to clean the pipes and internals thoroughly. Reply Anthony Hi I have two red flashing lights on my machine and have tried several times to run the descaler program but everytime it runs for about 5 minutes then the water fill light comes on again even when the tank is full and in place, it seems to go off when the water starts to come through hot. If I put the cleaning disc in and just try the cleaning cycle this just keeps running and does not stop until I turn it off any suggestions Reply Josh Freeman Hi Anthony, Couple of things to check. Have you checked that the float in the water tank is freely floating and not stuck. If it is stuck, you need to dislodge it. The cleaning cycle can take up to 30 mins and you need to make sure you run this with at least 500ml of water, are you saying it is taking longer than 30 mins to complete. Reply Simon King The yellow light against the cup turns red as soon I press it. I have tried the cleaning disc. I have cleaned the reader and made sure there is sufficient water. I have tried the reset. Nothing is working. The machine is not even 6 months old Reply Josh Freeman Hi Simon, There could be a couple of reasons why this is happening. Try all of the below, if that does not work, it could be that the machine is faulty and you need to contact Tassimo support for replacement under your warranty. You said you have tried the cleaning disc, did the cleaning cycle run.

If not, this could be because the dispensing spout is clogged, you can pop this out and clean it. Often it gets clogged when you have used hot chocolate pods and not run the cleaning cycle after, so the chocolate blocks the dispensing spout. Also check for bits of foil stuck in there, as this can happen when the foil lid is punctured. You said that you have cleaned the barcode reader, but wipe the top and bottom of the disc shelf, as there are sensors here, which could be misreading. Have you tried different pods. Sometimes the barcode on the pod can cause this Check the water container, is the float actually floating, or stuck, if it is not floating the machine will not work When was the last time

you descaled your machine. If you have not done this, run the cleaning cycle with descaler Please let us know if this helps as it will help others quickly. Reply Gennaro My Tassimo is one of the very early version and all the lights are blinking when I turn it on. I have tried all of the suggestions given above but it did not work. Any suggestions Reply Josh Freeman Hi Gennaro, I found this on the Tassimo website which answers the question. So your machine thinks it has no water to make a drink. Sounds obvious, but check that the water tank is full, and if it is, check that the float has not got stuck in the water tank, as this will cause the machine to think it has no water. If it is stuck, simply dislodge it, refill the tank and you should be good to go. Reply Earnshaw twice now when a coffee pod is in the machine it has exploded leaving water and liquid everywhere. Have put in cleaning disc and there are grains in the cup. Any suggestions please. Thanks Reply Josh Freeman This is annoying and sometimes you just get a few bad discs, drives me nuts as well. Pull carefully to lift and unhook the clips at the back. Was it and the area of the coffee machine to remove any coffee grinds.

Push the nozzle underneath the brew head, and it will simply pop up into the brew head itself, then simply remove it. In most Tassimo machines you can pull apart this piece, by removing the bottom part, which then frees the other parts. Again, wash thoroughly to remove any coffee grinds, and also clean the area of the brew head. I hope this helps. For me, it seems to sort it every time. Reply Connah I had a strange issue with my Tassimo Vivy2. I took it all apart to clean it as per manual yesterday, but when I reassembled it and plugged it in at the wall it comes straight on and continuously pumps cold water. This does not stop and will even continue after the water holder is empty. The only way to stop this is to unplug it, but as soon as I plug it back in it comes on instantly and carried on pumping. It's very new I only had it for Xmas. Any advice would be great. Thanks. Reply aletta My Tassimo stopped working it looks like everything is finr, the yellow cup light is on but put in a pod and press the start button absolutely nothing at all happens. It is clean and recently descaled, worked fine twenty minutes before. I did try the reset, twice, nothing changed. Reply Evan Thomas When running the machine the milk goes through perfectly. When the coffee pod is inserted the hot water passes through then half way through there is a splutter and coffee grounds are ejected causing a mess in the cup. Reply B. Edwards Hi I have a Tassimo type CTPM07, model Enr. When I put a pod in and turn the machine on, the water does not heat up and runs through until the tank is empty. Have you any thoughts of what the problem is. Thanks. Reply susanpashak HELP!!!! Cant get the side panel off!! help please Need step by step instructions Reply Josh Freeman Hi Susan, Which model of Tassimo do you have. Reply Ed I have a Tassimo coffee machine. I know how to descale the machine but I would like to know how to clean the water canister at the back of the machine.
