Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with bushnell pinseeker 1500 rangefinder manual . To get started finding bushnell pinseeker 1500 rangefinder manual , you are right to find our website which has a comprehensive collection of manuals listed. Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

bushnell pinseeker 1500 rangefinder manual

Something went wrong. View cart for details. This is a multilingual instruction manual. There are 14 pages of English instruction. All inside pages are intact. Some pages have light creasing and some curling from storage. Including the instruction manual there is also two accessories including the lens wipe and wrist strap. User Agreement, Privacy, Cookies and AdChoice Norton Secured powered by Verisign. This happens often, I have changed batteries and it. I can't find my manual but I recall something about avoiding lithium. Thanks for your help. You should only use Alkaline Bullseye I just acquired one but it has no manual. Answer questions, earn points and help others. This is a " This is a multilingual instruction manual. Including the instruction manual there is also two accessories including the lens wipe and wrist strap. Please see photos. ". We delete comments that violate our policy, which we encourage you to read. Discussion threads can be closed at any time at our discretion. When you're pin high, you don't have to worry about water hazards, bunkers, or steep slopes beyond the green. You may miss right or left, but if you don't short side yourself, you'll likely be putting most of the time. In fact, if you attend a professional tournament during a practice round, you'll see plenty of caddies using the PinSeeker to doublecheck yardages. The Basics Unlike the SkyCaddie, which uses a satellite-based global positioning system GPS, the Bushnell PinSeeker uses a laser to calculate distances. The PinSeeker measures the amount of time the light takes to bounce off of the object and return. Some simple math that includes the speed of light which is constant yields a yardage. It weighs only 11.9 ounces, so those that carry their bag won't notice the additional weight. The range finder is accurate to up to 1500 yards, though only with the use of a reflector. The PinSeeker can find a flag from up to 400 yards, and trees from up to about 1000 yards. <http://saeronbio.com/userData/board/dell-inspiron-600m-owner-s-manual.xml>

In reality, you'll never need it for anything over 400 yards. Not while golfing, anyway. Mine has lasted through 10 rounds and shows no signs of losing power. The two buttons provide for a simple interface and easy operation. It also features three different modes Scan, PinSeeker, and PinSeeker with Slope. Scan mode allows you to scan slowly along a tree line while the LCD updates its measured yardage. This mode is useful if you're standing on the tee looking for a good yardage to a tree line, a creek, or a series of fairway bunkers, but won't be terribly useful on courses with which you are familiar. PinSeeker mode attempts to find the flag among a sea of highly reflective trees. It does so by acquiring multiple signals and then displaying the distance to the shortest. The theory makes sense, and in practice that theory held up. You've got to be careful to avoid overhanging limbs, though, as occasionally the laser will bounce light off of them and you'll get an unusual yardage. If you have 140 yards to an elevated green, it's tough to approximate how long the hole is playing. Point the PinSeeker at the flag, hold the Power button to acquire the distance, and let go of the Power button to check the slope. Quite handy! Targets set at 10, 25, 35, 50, 75, 100, 150, and 200 yards were all accurately measured to within a yard or two by the PinSeeker. To check the slope measurements, I borrowed a friend's surveying equipment and found the slope measurements to be similarly accurate. I tried strapping it to the outside of my bag, but it flopped around and got in the way. Unlike the SkyCaddie and due to its larger size, the PinSeeker can't be clipped to a strap and forgotten. If you're a cartdriving kinda guy, well, you've got plenty of room for the PinSeeker. Target acquisition takes about three to five seconds, and if you work the PinSeeker into your preshot routine while others are playing, you will not slow up your group at all. <http://aadhaarretail.com/administrator/imagetemp/dell-inspiron-6300-manual.xml>

Unlike the SkyCaddie, the PinSeeker does require a direct line of sight to the target. If you're frequently behind trees or play a course with several blind shots, you're going to be doing a lot of walking to get yardages, and the PinSeeker may not be for you. Whether or not these averages coincide with your game I cannot say, but I found the adjusted yardages to be quite accurate for my game. One hole on my home course typically leaves me anywhere from 50 to 100 yards to a severely uphill green, and the slope adjustments have proven to be quite a help on this hole. I can dial in shots within 120 yards quite accurately. The SkyCaddie provides yardages only to the front, middle, and backs of greens, leaving some guesswork about the yardage to the pin. I've put more shots close to the flag from within 120 yards with the PinSeeker than I did with the SkyCaddie, and that's testament enough to me. I not only dropped it in a pond in my testing, but I dropped it on rocks and a cartpath, in a bunker or two, and plenty of times on the grass. It survived each time, though not without a small scuff mark or two. You may or may not care how far your neighbor's front door is from your house, but with the PinSeeker you can find out. Given the choice between the SkyCaddie and the PinSeeker, I'll take the PinSeeker. While the SkyCaddie requires a subscription to enable some of its features especially if you frequently travel to new courses, the PinSeeker "just works." I'm not often behind trees and my home course doesn't have any blind shots, so I almost always have a clear view of the flag. The PinSeeker more than makes up for its extra bulk over the SkyCaddie with the Slope feature. That it measures the distance to the flag and not simply to the edges of the greens is another bonus. My home course has pretty accurate yardages on the sprinkler heads, but unless you're in the middle of the fairway and the pin is in the middle of the green, you're going to have some guesswork left.

Simply put, the PinSeeker eliminates the guesswork. After much research it was this review that finally convinced me to purchase a Bushnell Pinseeker 1500 from GolfGods. Many thanks, keep up the good work. TheSandtrap has now been added to my favourites list. The sandtrap.com is by far the best website on Golf!! Thank you for the very informative article! Pull rangefinder out of pocket in my bag. Aim at flag or other object bunker, front of green, tree. Press the button and then get read the distance. I can move the rangefinder around and it will give me a continuous reading of distance. Put the rangefinder back in golf bag pocket. Two hands are better if your hands are unsteady. I can aim at the flag, and once it is ranging, I then can then move to the front of the green to figure out how much space I have between the flag and front of green or flag and bunker. No need to find sprinklers. This is especially good for me, as I am in the rough a bit. No subscription fees or having to download stuff from my PC. But I then read a bunker or the green surface itself, which for me is good enough from 200 plus yards. I am not ready to upgrade to the Pinseeker as it is pricey and a bit larger than the one I currently have. After using a rangefinder I can't figure why anyone would use the GPS. I can get that info with a yardage book and a sprinkler head. A couple of seconds with the rangefinder and you know exactly the distance to the flag. You can then play your shot accordingly. He doesn't hunt in the summer so it is mine for golf and I give it back when hunting season starts. It is the Bushnell Yardage Pro. From what he tells me, the technology is all the same no matter which model you get. You just get a longer range the higher price you go. Some of the better models have more accurate crosshairs to make it easier, but that only saves a few seconds. Always check the local yardage as well.

<http://www.drupalitalia.org/node/78873>

If you measure something at 180 yards and you are standing on the 150 marker, you probably hit a tree behind the green. Keep looking until you get the one that makes sense, that is the one you want. A place like Bass Pro Shops will sell their hunting models even though there is no difference much cheaper than the golf stores. I liked that I didn't have to find the course yardage marker, step off the yardage, add or subtract from the red or blue pins. With the Sky Caddie, sometimes on an overcast day I could not get readings or they were way off from the Golf Course GPS. Mainly because you get exact yardage to the pin and can stick it close!!! To me the biggest advantage over GPS is that you can quite accurately measure the distance to just about anything on the golf course!!. That includes the golfers in front of you. No more worrying about hitting into them. Measure the distance, from your ball, to carry a bunker. Measure the distance from the front of the green or a greenside bunker to the flag. I can't see why anyone would want a GPS device once they have tried a rangefinder. I did a bit of research and ultimately came to the conclusion that I was going to go buy the best I could for as cheap as I could. The Bushnell 1500 Rangefinder with Pinseeker no longer being in production, I scoured ebay for some weeks and finally picked one up for under A150. This has been particularly useful over this winter when many winter greens have been used on our course, giving unfamiliar distances. GPS would not have helped in these circumstances. I did not consider the Slope option as it is not legal in competition. I have a pinseeker slope version also and never pay any attention to the slope value. I would not recommend buying a unit with slope. Notify me of new posts by email.

Though your maximum range will vary from many factors including the angle of incidence to the target, the targets reflectivity, and the ambient lighting conditions , the PinSeeker 1500 will always give the best range of any Bushnell unit. The PinSeeker 1500s observing modes include the PinSeeker mode, which ignores objects behind the pin, as well as a scanning mode which gives continuously updated readings. Optics are fully multicoated for wonderful resolution and contrast. The PinSeeker 1500 is Bushnell's flagship model and it shows. The wind and green topography are yours to factor, but there's no doubt that angle compensation measuring can improve your play. This makes it quite useful for golfers. The Pinseeker 1500 features Selective Targeting Modes, superb optical quality, 100% waterproof construction, and Bushnell's RainGuard coating. The Pinseeker 1500 emits invisible, eyesafe, infrared energy pulses. Its Advanced Digital microprocessor and ASIC chip Application Specific Integrated Circuit results in instantaneous and accurate readings every time. Sophisticated digital technology instantaneously calculates distances by measuring the time it takes for each pulse to travel from the rangefinder to the target and back. The ranging accuracy of the Pinseeker 1500 is plus or minus one yard under most circumstances. The maximum range of the instrument depends on the reflectivity of the target.

<https://egrenage.com/images/bpo-operations-manual.pdf>

The maximum distance for most objects is 1,000 yards, while for highly reflective objects the maximum is 1,500 yards. The Pinseeker 1500 features a powerful 7x magnification monocular for viewing your target. Optics are fully multicoated, allowing maximum light transmission for optimum brightness, superb resolution, and contrast for a clear vivid image even in lowlight conditions such as dusk or dawn. A liquid crystal display LCD is mounted within the optical system and, when activated, displays a reticle for targeting, yards and meters, and Mode indicators. Laser Rangefinder Features Standard with Automatic Scan Scan across the course while viewing a continuously updated LCD display of the distance between you and your target. Reticle The distance to objects targeted in these crosshairs will be displayed on the Distance Readout with the press of a button. Battery Indicator Flashes when battery power is low. Target Quality Gauge Gauge indicating amount of energy pulses being received back from the target. Pinseeker 1500 Targeting Modes BullsEye Geared for closerange use, this mode acquires the distances of small targets and game without inadvertently measuring background target distances. When more than one object is acquired, the closer of the two objects is shown on the LCD display.. Brush Ignores the foreground, such as brush, boulders and tree branches, and provides distances on the LCD display to background objects only.. PinSeeker Designed exclusively with the bottom of the cup in mind, this mode allows easy acquisition of the flag without inadvertently capturing background target distances. When more than one object is acquired, the closer of the two objects is shown on the LCD display.. Laser Rangefinder Tech Talk A laser rangefinder is a distancemeasuring instrument that uses laser technology to calculate the distance to targeted objects.

Then, the rangefinders highspeed digital clock measures the time it took for a laser beam to reach a target and return to the unit. The entire process is so fast that less than a second elapses between the time you press the button to generate a laser beam to the time the exact range to your target is displayed. Ranges for moderately reflective targets, like trees, fall somewhere in the middle. Most experienced hunters will use their rangefinder to frequently estimate ranges to near and distant landmarks before they actually encounter a game animal. The Pinseeker 1500 features Selective Targeting Modes, superb optical quality, 100% waterproof construction, and Bushnells RainGuard coating. The Pinseeker 1500s Advanced Digital microprocessor and ASIC chip ApplicationSpecific Integrated Circuit results in instantaneous and accurate readings every time. Optics are fully multicoated allowing maximum light transmission for optimum brightness, superb resolution, and contrast for a clear vivid image even in lowlight conditions such as dusk or dawn. BDuBord 5.0 out of 5 stars After using the Pinseeker for a few rounds I quickly learned how to focus and acquire the desired target in a matter of seconds. As I walk up to my ball I pull out the rangefinder, acquire the target, put it back in the case and hit the shot without adding more than 10 seconds to my preshot routine.

This rangefinder is most definitely a game improvement device and has helped me to select the right club, and in many cases made me aware that I needed to change clubs. In my opinion it is better than the GPS devices whereas you must have a course loaded or manually enter the course info beforehand. If you ride in a golf car with GPS and are subject to cart path only, then the point where your ball lies will only be an estimate of the actual yardage. The Pinseeker can go to any course in the world and be used immediately on any part of the course. If you are looking for a device that will help with club selection and game improvement, then I would highly recommend the Pinseeker 1500. This particular laser rangefinder is so versatile, I'm so glad I purchased it and for sure, this unit is a definite KEEPER. The pinseeker mode is so sweet that it automatically seeks the pin for you despite all the landscapes in the background it gives you the distance to the closest object. So it doesn't matter if your silly hands are shaking, just put the crosshair over the pin and as soon as it hits the pin, you get the reading. You can aim at anything in that hole; something that a GPS can't do for you. GPS rangefinders are set to give you the bunker and water hazard reading and maybe 150 yd. layup. This Bushnell Pinseeker gives it justice when you're out there practicing in the driving range you can get the actual reading of the flags so you know how far you're actually hitting your shots. Something that a GPS can't definitely do for you. No annual subscription required and the hassle of downloading or requesting courses. It's a very straight forward unit. It's worth the investment. So, what are you waiting for? I like to calculate my own angles and account for temp in multiple rifles so this true distance works great for me. If you use this for golf I would recommend a shooting sport instead lol.

There isn't anything quite like hitting a steel plate at 1000 yards then 2 seconds later hearing the bullet impact. It works significantly better than the older version of this same product locking in much quicker plus it can find the flag MUCH easier. My dad and I both use this when we are playing golf and find it to be completely reliable. You will also find additional uses for your Yardage Pro Laser Rangefinder. I use it for sighting in my rifle and for all sorts of other things. One small downside. You do have to drag it out and sight in every time you need a measurement and that does get a bit tiresome. The GPS units that are on some golf carts on some courses are VERY convenient but do not give precise yardage to the pin and other objects. I heartily recommend this product. It delivers exactly as promised. The new pinseeker feature makes this rangefinder a vast improvement over the original in terms of locking onto the yardage to the pin. I was amazed and very impressed with this feature. The 7x reticle also makes it much easier to lock onto the pin or any other object on the course, but it does make holding it steady more of a challenge when ranging distances over 175 yards. In comparison to the Sky Caddie product which provides distance to front, back and middle of green and some other features on the hole. The rangefinder provides exact distance to the pin; to the pin placement on any particular day. One can also range to the back and front of the green; the obvious disadvantage of a rangefinder is that it's a line-of-sight device. Another use my rangefinder has is off the tee; to scope the yardages where there is trouble. I am very satisfied with my purchase. But I think one point is not emphasized enough. But with this Bushnell Pinseeker 1500, you don't have to nail it. Just aim it generally at the flag and move it around a bit. When it captures the flag, the yardage is locked in.

So now my aim doesn't matter and I can shoot from much farther away and get the accurate distance in just a few seconds. One, it's not legal and, two, can't you already tell when the hole is uphill or

downhill. I think its wasted money although it DOES work as advertised. What a Christmas or birthday gift!!! Sorry, we failed to record your vote. Bushnell Elite 1500 205100 Optical Devices Laser Rangefinder download pdf instruction manual and user guide. 21 Aug 2012. Learn more about our Return If you cannot upgrade your browser or use an alternative device to visit us, Bushnell Pinseeker 1500 rangefinders are designed with the bottom of the cup in mind. Bushnell Pinseeker is the only golf rangefinder to compensate for changes in elevation. It doesn't just tell you how far it tells you exactly how to play it. The Pinseeker 1500 offers 7x magnification, and is rain guard coated, making this Bushnell range finder good for any weather. With Bushnell Pin Seeker 1500, you never again question the range at the top of your swing. Can this be fixed by Bushnell, how much cost We recommend contacting the manufacturer for warranty and repair information. Their contact information can be found at this link It is dead on accurate. The slope function usually only changes range by less than 10 yards, so it is nice but not necessary. The 9 volt battery lasts about 5. No apparent reason. Does this with new battery. Also, it does not pick up white flag well, even with checkerbo. I think a rangefinder without pinseeker is nearly

useless. Pros easy to use; pin seeker is necessary. Cons slope corrections not enough. If you're a serious golfer, this is a must have. Since I started using the Pinseeker, I've taken several strokes off my scores because of club select. Mint condition. Item comes with the hardcase straps and neck lanyard. Used twice on a hunting. more trip. From a smoke free pet free home. Sorry no international shipping. A lens cloth, a eyepiece protector and its manual. This is a fantastic rangefinder. Its in excellent working condition. It looks like new. The view is clean and bright. The optics are free of any scratches or scuffs. It would be perfect for any avid golfer. Have a look at my pictures.

Here's some information about the rangefinder The Bushnell PinSeeker 1500 with BuiltIn Scope Compensator uses a digital inclinometer to determine distances based on the degree of elevation change. It doesn't just tell you how far it tells you exactly how to play it. Magnification 7x Range 51500yds. It is in Excellent Used Condition. I see no scratches or scars on the model. I am including the original box and the carrying case. Happy Bidding! Mint condition. Item comes with the hardcase straps and neck lanyard. Used twice on a hunting trip. From a smoke free pet free home. Sorry no international shipping. Domestically we offer USPS Priority Mail, Parcel Post or UPS ground. For International orders we ship Priority International and are unable to make any exceptions. Payment is due within 7 days of winning an auction. We are happy to combine shipping charges as long as payment is made within 7 days of the oldest item. Please do not pay for any items until you receive a final invoice for all of the items you wish to combine. We cannot combine any orders that are paid. When you are finished bidding please direct message us for an invoice. We will not send a combined invoice unless it is requested. If eBay requires immediate payment for any buy it now items we are not able to combine the shipping. Please note eBay will automatically open an unpaid item case on the 8th day if payment has not been received. Manage all your eBay listings with KyoZou. The inside, however, is in great working condition and seems to be accurate. The only issue is the missing battery cover. Replace that and you've got a complete, working laser rangefinder. Can even be juryrigged to work by using a piece of foam and tape. How I tested it: If you've got a nonworking Pinseeker 1500 laying around that has a good battery cover, then just put the battery cover on this one. Listing includes Pinseeker 1500 Laser Rangefinder, Brand new Bushnell On Tour Laser Rangefinder Carrying Case, and new lanyard.

Shipping will be by USPS. Payment by Paypal only. No exceptions. I will only ship to international addresses using the Global Shipping Program if this item. If you don't see a selection for Global Shipping or International shipping, then it's not allowed and won't be available for International shipping. If it's a restricted or unallowed item, and you want it shipped to you in another country, then you will have to have it shipped to a friend or family member in the USA, with an eBay confirmed address, and have them ship it to you. Allow extra time after GSP has received item. GSP will invoice you for extra shipping costs to ship to your country. Only confirmed addresses will be shipped to. I say it will take up to 3 business days to cover any unexpected delays. But I usually ship next day or, sometimes, the same day if I receive payment early enough. Complete payment is due within 3 days of purchase. Powered by The free listing tool. List your items fast and easy and manage your active items. The slope can be actuated on and off for tournament play following USGA rules. Battery included. Good working order. Condition GOOD but there is no case and the battery clasp is broken although it doesn't fall out easily. A tiny bit of electrical tape would do it. Our goal at Golfbagdrop is to provide you with quality golf equipment in honest fashion. With unparalleled customer service. In order to do so, every item we sell, and all the information we provide, needs to be of the highest standard. We are proud of our 100 percent positive feedback rating, and will make. We hope you have life long enjoyment playing the greatest game ever played. We are available 7 days a week. Up for auction is this Bushnell Pinseeker 1500 Laser Rangefinder. This unit shows some wear. There are scratches and paint wear spots on the exterior. This device has been tested and its functionality is verified. Please see actual product images for a closer look.
