ROGUE ARCHETYPE: DARKSTALKER

Through the hours that they spend in independence after leaving their first line of work, these are those who are most skilled at what they do. They are those who are most skilled at what they do. They are those who are most skilled at what they do.

LUKES IN THE DARK
When you choose this archetype at 1st level, you learn how to use the darkness of the night to your advantage. You gain the *Darkvision* feature.

SHADOWS
Starting at 2nd level, you learn how to use the shadows to your advantage. You gain the *Shadow* feature.

FACE TO BLACK
At 5th level, you gain the ability to enter the darkness of the night. You gain the *Darkness* feature.

DARKNESS FALLS
At level 11, your mastery grows further, and allowing you to bring your darkness to bear and reveal the hidden light.

ONE WITH DARKNESS
At level 17, you reach the ultimate mastery, and you can now use your darkness to your advantage. You gain the *Darkness* feature.

Demon Hunter
You've dedicated your life to hunting that which goes bump in the night. Demon hunters range from former thieves looking for redemption to assassins who want to hunt the most dangerous of targets. You specialize in tracking and killing fiends and other evil beings. Demon Hunters value having the wisdom to track their prey and resist mind-influencing abilities.

Piercing Attacks
You strike with such fury that even the toughest of hides cannot resist your blows. Starting at 3rd level, whenever you make an attack with a weapon, the damage is treated as coming from a magical weapon for the purpose of overcoming resistance to non-magical weapons.

See the Truth
Your instinct as a hunter is so finely tuned that nothing can fool your eyes. Starting at 3rd level, you can use your action to activate your finely honed senses. For 5 minutes, you can see the true form of any creature within 50 feet. This reveals the identity of any shape-changers as well as anyone using magic to change their appearance. Starting at 9th level, this also reveals invisible creatures. You may use this ability a number of times per day equal to your Wisdom modifier (minimum 1).

Resist Temptation
Fiends often try to turn heroes against one another, but your mind is above that. Starting at 9th level, you may add your proficiency bonus to any saving throw against becoming charmed, frightened, or otherwise mentally influenced by magic (DM's discretion). At 17th level, you have

advantage on Wisdom and Charisma saving throws against spells or abilities used by fiends and aberrations.

Follow the Trail
No evil can escape your sight. Starting at 13th level, if you have encountered a fiend, celestial, aberration, undead, or monstrosity, you have advantage on any checks made to track it or detect its presence. You also have advantage on any knowledge checks made to learn about any of the above types of creatures. You may also cast *find* once per long rest.

Cold Iron Weaponry
You've developed a way to make your strikes prevent a fiend's escape. Starting at 17th level, when you successfully damage a creature with a weapon attack, it may not teleport for 1 minute. Additionally, if it is not native to this plane of existence, it takes 3d6 additional damage.

Scoundrel
You're a career criminal. You don't break into buildings; you walk right in. Scoundrels range from smugglers and pirates to politicians. Scoundrels value charisma and prefer to trick an opponent to their face rather than sneak behind their back.

Feint
Your fighting style reflects your deceptive nature. Starting at 3rd level, you may use your cunning action to feint. To feint, make a Charisma (Deception) check opposed by a creature within 15 feet's Wisdom (Insight) check. If you tie or beat their check, you have advantage on the next attack against

ROGUEISH ARCHETYPES

Rogues have many features in common, including their emphasis on perfecting their skills, their precise and deadly approach to combat, and their increasingly quick reflexes. But different rogues steer those talents in varying directions, embodied by the rogue archetypes. Your choice of archetype is a reflection of your focus - not necessarily an indication of your chosen profession, but a description of your preferred techniques.

SHADOW

Some rogues choose to delve into the intricacies of shadow magic, using its unique powers to enhance their skills in stealth and deception. These rogues are a very diverse subset, from simple thieves to hired killers to highly trained bounty hunters. By learning how to separate their shadow from their body, shadow rogues become difficult to catch and even harder to kill.

BONUS CANTRIPS

When you choose this archetype at 3rd level, you gain the *unobtrusive cantrip* and the *disjunct shadows cantrip*.

SEVERED SHADOW

Starting at 3rd level, you can use the bonus action granted by your *Cunning Action* to separate your shadow from your body, turning it into a shadowy replica of yourself and then moving it up to 30 feet as part of the same action. On subsequent turns until you reunite with your shadow, you may use your *Cunning Action* to move it another 30 feet, up to a maximum of 120 feet away from your current location. While your shadow is separated from you, you no longer cast a shadow. As a bonus action on each of your turns, you may choose to teleport to the location of your shadow, reuniting yourself with it.

Once you use this feature, you can't use it again until you complete a short or long rest.

DECEIVING DARKNESS

Starting at 9th level, you have advantage on a Dexterity (Stealth) check if you are in dim light or darkness.

SHADOW SIMULACRUM

At 13th level, you gain greater control over your shadow. When your shadow is separated from you, you can also have it perform the *Help* action as part of the bonus action required to move it, and your shadow can also manipulate objects weighing up to 25 pounds.

MASTER OF SHADOWS

When you reach 17th level, you have gained ultimate control over your shadow. When you sever your shadow, it can be separated from your current location by up to 500 feet. Additionally, you no longer have to complete a short or long rest to use the feature again.

The four valves per cylinder (two intake and two exhaust) were actuated by pivot-type roller rocker arms. Furthermore, the crankshaft journals were made from aluminium and cast iron due to the high pressure applied on both side of the cylinder block. The forged connecting rods had fracture split bearings for the crank end and an asymmetrical profile which increased precision during assembly. Describing Copyright in RDF Creative Commons Rights Expression Language The Creative Commons Rights Expression Language (CC REL) lets you describe copyright licenses in RDF. The type and amount of precious metals in the oxidation catalyser and DPF catalyst were also revised; The number of idlers used in the auxiliary belt system was reduced; A more precise sensor measured battery current, voltage and temperature; and, The rear flange and bracket material, exhaust pipe and end plate material were changed for rust prevention. For more information on describing licenses in RDF and attaching those descriptions to digital works, see CC REL in the Creative Commons wiki. EGR and DPF The EE20 diesel engine had a water-cooled exhaust gas recirculation (EGR) system which recirculated exhaust gases to the intake to lower combustion temperatures and reduce NOx emissions. The Euro 5 and Euro 6 EE20 engines had a closed-loop diesel particulate filter (DPF); both the oxidation catalyst and DPF were positioned next to the turbocharger to utilise the heat of the exhaust air. A License may have a Jurisdiction, as defined by Jurisdictions. Relative to the Euro 5 version, changes for the Euro 6 EE20 engine included: An open deck cylinder block; An increase in piston crown capacity; A new piston skirt coating was introduced to reduce friction; A reduction in the compression ratio to 15.2:1 to lower combustion temperature and reduce NOx emissions; A fourth generation common rail injection system was introduced for higher injection pressure (200 MPa, previously 180 MPa) and a finer fuel spray; Each diesel injector had an integrated driver unit to reduce fuel leak volume, fuel pump load and improve fuel economy; A low-friction timing chain was introduced to drive the fuel pump (previously gear-driven) for quieter operation; The glow plugs were revised to improve pre-heating temperature at start-up and increase after-glow time; Oil jets were added to the timing chain drive; A low-pressure EGR circuit was introduced to increase the EGR rate, while the high-pressure EGR circuit was 'optimised'; The turbocharger repositioned at the bottom right of the engine (previously under the engine) and improved vane control was achieved; The diesel particulate filter (DPF) substrate specifications were revised and regeneration performance enhanced. It is understood that the maximum turbine speed for the IHI turbochargers used in the EE20 engine is 190,000 rpm. A License requires a Requirement. To enhance torque at engine speeds below 1800 rpm, the nozzle vanes would close to narrow the air path and increase the speed of the air flow. The pistons had internal cooling channels, while oil jets in the crankcase sprayed the underside of the pistons. A License may be deprecated; provides the date deprecated on. A related resource which defines non-binding use guidelines for the work. Cylinder head The EE20 engine had an aluminium alloy cylinder head that was 17 mm thinner than the EJ20 engine. Injection and combustion The Euro 4 and Euro 5 EE20 diesel engines had a Denso common-rail injection system with eight-hole, solenoid-type injectors that achieved an injection pressure of 180 MPa. For the Euro 6 EE20 engine, however, injection pressure was increased to 200 MPa. For the EE20 engine, the injectors were positioned at an almost 90 degree angle to the cylinder and were 40-50 mm shorter than those used in inline four-cylinder diesel engines. The Euro 5 and Euro 6 EE20 engines are understood to have ceramic-type glow plugs. A License prohibits a Prohibition. , attivi Crankshaft, connecting rods and pistons To withstand the high combustion pressures of a diesel engine, the crankshaft for the EE20 engine was subjected to a surface treatment for increased strength. Furthermore, the intake ports and the diameter of the intake valves were designed to create a swirling effect for the air as it entered the combustion chamber. Generally, VNTs use movable vanes in the turbine housing to adjust the air-flow to the turbine to realise comparable exhaust gas velocity and back pressure throughout the engine's rev range. The EE20 engine had double overhead camshafts (DOHC) per cylinder bank that were driven by a chain and gear with a speed-reducing gear. Euro 6 changes The Euro 6 emissions compliant EE20 diesel engine was introduced in the Subaru BS Outback in 2014 and the Subaru SJ-II Forester in 2015. At higher engine speeds, however, the vanes would open to reduce airflow resistance and improve fuel consumption. Alternator The alternator for the EE20 diesel engine had a voltage charging control system which, to reduce the alternator's load on the engine, reduced the charging voltage when the vehicle was idling or being driven at a constant speed and increased voltage at low speeds. Initially, the turbocharger was positioned under the engine. Except where otherwise noted, content on this site is licensed under a Creative Commons Attribution 4.0 International license
